

Add app navigation

Connect list, new-request and request-detail views.

THE FINISHED RESULT

The same request opens consistently and an invalid id produces a safe missing-record message.

Before you start

Environment: React + JavaScript + Supabase for the connected path; plain JavaScript local demo

Access and plan: The supplied local demo needs only a browser. The connected path requires Node, a React project, a Supabase development project and approved test accounts.

Practice project: Harbor request board

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[React: Learn](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

List the routes or views and the data each requires. Give every request a stable id rather than using its row position as identity.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Make Add request open the creation view and each row open the corresponding detail. Include a clear way back to the list.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Preserve unsaved user input when reasonable and confirm before discarding substantial edits. Ensure navigation changes are announced or titled appropriately.

Check: record what changed and confirm you are still working in the intended demo project.

04 / Step 4

Test Back, reload and an unknown request id. A missing record should produce a clear state instead of another user's data or a blank screen.

Check: record what changed and confirm you are still working in the intended demo project.

Open a request for editing

Captured from the supplied working example. The request board uses local browser storage; this is not evidence of a connected database or authentication.

RAY / SETLY LEARN | ORIGINAL PRACTICE GUIDE | 01 OCT 2026

3

Test, troubleshoot, repeat.

If something goes wrong

If the wrong row opens after sorting, stop using array position as a record identifier.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

The same request opens consistently and an invalid id produces a safe missing-record message.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
