

Edit and delete records

Change and remove only the intended request.

THE FINISHED RESULT

The intended row changes or disappears, other rows remain unchanged, and unauthorized access is denied.

Before you start

Environment: React + JavaScript + Supabase for the connected path; plain JavaScript local demo

Access and plan: The supplied local demo needs only a browser. The connected path requires Node, a React project, a Supabase development project and approved test accounts.

Practice project: Harbor request board

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

Supabase: [React quickstart](#)

Supabase: [Row Level Security](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Open one record by its stable id. Populate an edit form from the saved values and show what will be changed.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Update only the permitted fields through the authenticated API. Read the record back rather than trusting an optimistic screen alone.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Before deletion, show the request title and ask for an explicit delete action. Remove the row only after the backend confirms success.

Check: record what changed and confirm you are still working in the intended demo project.

04 / Step 4

Attempt edits with another test user's account and try an already-deleted id. Handle denial or missing data without altering another row.

Check: record what changed and confirm you are still working in the intended demo project.

Edit the selected local request

Captured from the supplied working example. The request board uses local browser storage; this is not evidence of a connected database or authentication.

RAY / SETLY LEARN | ORIGINAL PRACTICE GUIDE | 01 OCT 2026

3

Test, troubleshoot, repeat.

If something goes wrong

If every row changes, inspect the query filter immediately. Updates and deletes must be scoped to the intended record and ownership rules.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

The intended row changes or disappears, other rows remain unchanged, and unauthorized access is denied.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
