

Check site links and downloads

Find broken routes before customers encounter them.

THE FINISHED RESULT

All critical links and downloads work for the intended visitor without relying on your signed-in session.

Before you start

Environment: Your existing website platform and integration tools

Access and plan: Authorized access to a test copy, site records and relevant accounts. Live restore, access changes and publication need owner approval.

Practice project: A staging copy of Harbor

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[MDN: Learn web development](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Start from the homepage and list the menu, contact, booking and download links that matter to the business.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Open each destination signed out, including PDFs and ZIPs. Confirm that downloads are the intended version and can be read.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Check internal section anchors and links in the mobile menu. Record the source page and failed destination for each defect.

Check: record what changed and confirm you are still working in the intended demo project.

04 / Step 4

Repair approved defects, then repeat the exact original test path and record the result.

Check: record what changed and confirm you are still working in the intended demo project.

Test, troubleshoot, repeat.

If something goes wrong

If a file downloads but will not open, verify its actual file type and integrity rather than changing only its extension.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

All critical links and downloads work for the intended visitor without relying on your signed-in session.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
