

Set up starter files

Open the supplied Harbor website starter and serve it locally.

THE FINISHED RESULT

The page loads over localhost, your heading change appears, and there are no missing-file errors.

Before you start

Environment: HTML, CSS and JavaScript; Python local preview server

Access and plan: Text editor, modern browser and Python for local preview. Hosting and form-backend accounts are needed only for their corresponding lessons.

Practice project: Harbor Home Care

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[MDN: Learn web development](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Download and extract the website starter. Keep index.html, styles.css and script.js in the same folder and retain a clean original copy.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Open that folder in a text editor. Read index.html first and identify the stylesheet and script references.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

From this folder, run `python -m http.server 8090`. Open `http://localhost:8090` rather than a file-system URL.

Check: record what changed and confirm you are still working in the intended demo project.

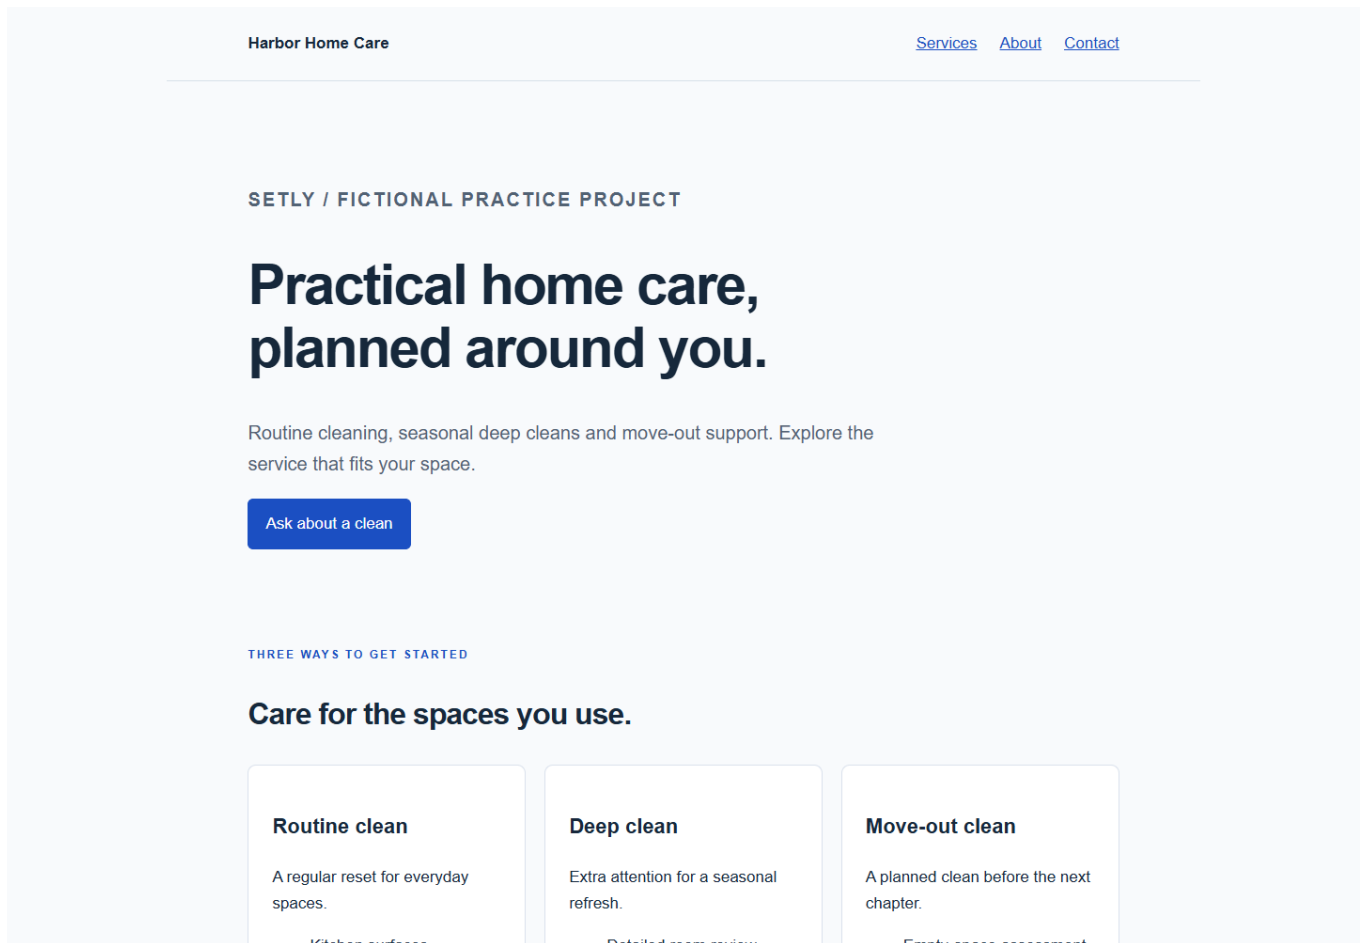

04 / Step 4

Change the page heading, save and refresh. Check the browser console and confirm the stylesheet still loads.

Check: record what changed and confirm you are still working in the intended demo project.

The completed Harbor service page

Captured from the supplied website example. The static contact form needs a backend; the downloadable educational backend stores demo enquiries locally.

Test, troubleshoot, repeat.

If something goes wrong

If the port is occupied, choose another port and update the browser URL. Run the command from the folder containing index.html.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

The page loads over localhost, your heading change appears, and there are no missing-file errors.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
