

Create service sections

Present three services with clear scope and next actions.

THE FINISHED RESULT

Services remain distinguishable, all actions reach contact, and another card does not break the layout.

Before you start

Environment: HTML, CSS and JavaScript; Python local preview server

Access and plan: Text editor, modern browser and Python for local preview. Hosting and form-backend accounts are needed only for their corresponding lessons.

Practice project: Harbor Home Care

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[MDN: Structuring content](#)

[MDN: CSS layout](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Write a title, a two-sentence description and three inclusions for each of Routine clean, Deep clean and Move-out clean.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Add these as separate articles inside the services section. Use consistent heading levels and meaningful link text.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Link each service action to the contact section and include the service name in the nearby text so the next step is clear.

Check: record what changed and confirm you are still working in the intended demo project.

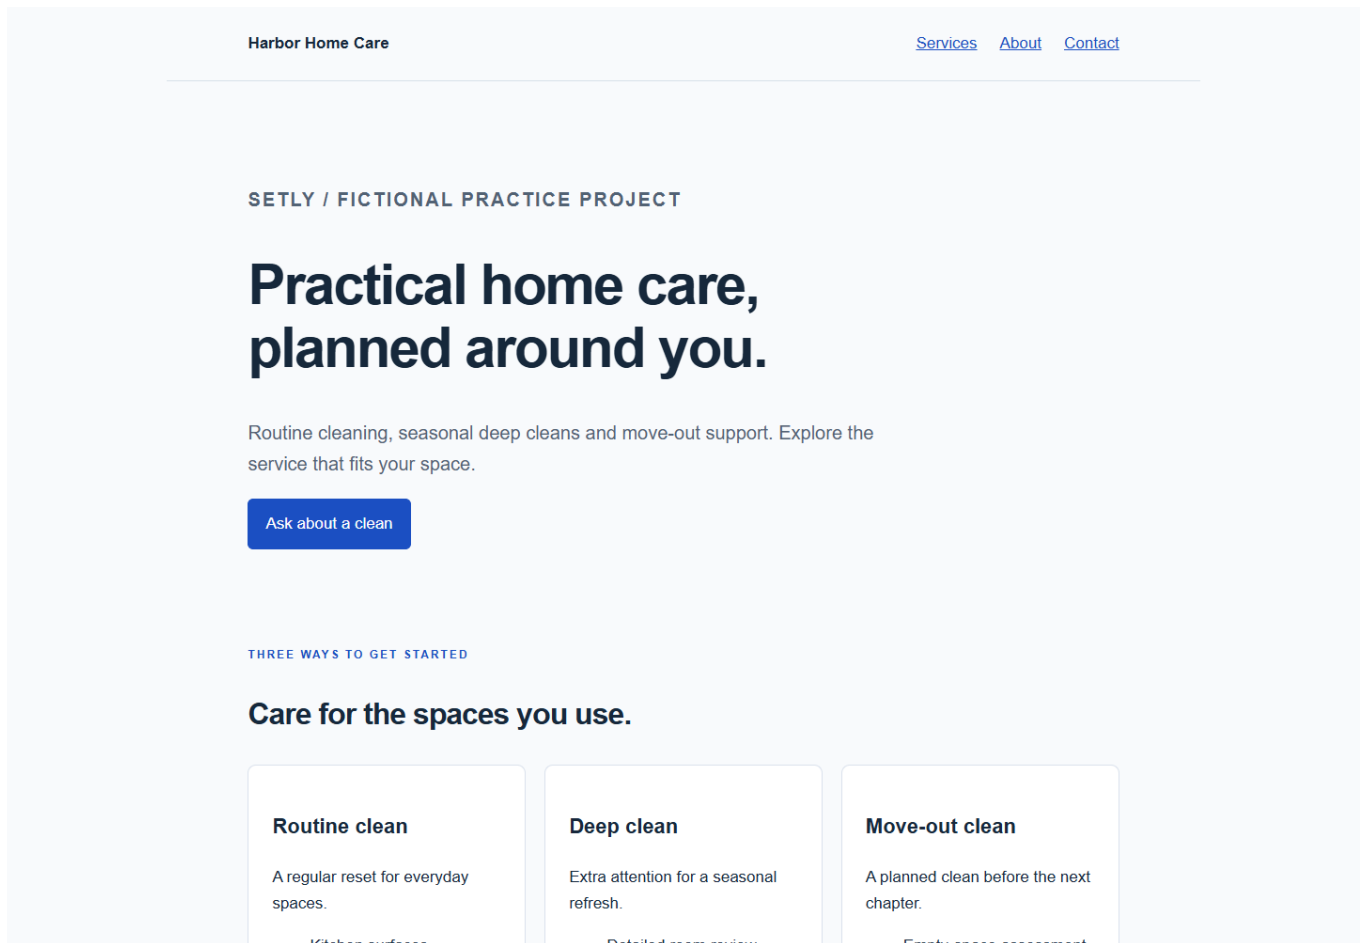

04 / Step 4

Add a fourth service as a stress test, then inspect desktop and mobile layouts. Remove it after checking the layout can grow.

Check: record what changed and confirm you are still working in the intended demo project.

Three distinct service sections

Captured from the supplied website example. The static contact form needs a backend; the downloadable educational backend stores demo enquiries locally.

Test, troubleshoot, repeat.

If something goes wrong

If all buttons say Click here, replace them with task-specific language. If one card stretches badly, inspect the grid rather than trimming useful copy.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

Services remain distinguishable, all actions reach contact, and another card does not break the layout.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
