

Add metadata and page identity

Give the example page a correct title, description and language.

THE FINISHED RESULT

The rendered page has the intended language, title, viewport and description without contradictory duplicate tags.

Before you start

Environment: HTML, CSS and JavaScript; Python local preview server

Access and plan: Text editor, modern browser and Python for local preview. Hosting and form-backend accounts are needed only for their corresponding lessons.

Practice project: Harbor Home Care

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[MDN: Structuring content](#)

[Google Search Central: SEO Starter Guide](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Set lang=en on the document and write a title matching the page's actual service and business.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Add a unique meta description and check the viewport meta tag. Keep page headings aligned with what the metadata promises.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Choose the final canonical URL only after knowing the approved production address. Do not point test pages at an unrelated business.

Check: record what changed and confirm you are still working in the intended demo project.

04 / Step 4

Inspect the served HTML and browser tab. Confirm titles change appropriately if you add a second page.

Check: record what changed and confirm you are still working in the intended demo project.

Test, troubleshoot, repeat.

If something goes wrong

If the tab title is wrong, check the served file rather than an unsaved editor tab. Search snippets may differ from the description you supplied.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

The rendered page has the intended language, title, viewport and description without contradictory duplicate tags.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____
