

Deploy the example website

Publish the static demo to an approved test destination.

THE FINISHED RESULT

The approved public URL serves the intended version and all relative assets and links resolve.

Before you start

Environment: HTML, CSS and JavaScript; Python local preview server

Access and plan: Text editor, modern browser and Python for local preview. Hosting and form-backend accounts are needed only for their corresponding lessons.

Practice project: Harbor Home Care

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[GitHub: Creating a Pages site](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Confirm the starter contains only public files. Remove local notes, credentials and private images from the folder you intend to publish.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Create a repository for the demo and follow the hosting provider's deployment instructions. Use the included relative asset paths when hosting under a project subpath.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Record the exact public URL and commit or file version. Open the address signed out and visit every page and asset.

Check: record what changed and confirm you are still working in the intended demo project.

04 / Step 4

Test navigation and layout again on the hosted copy. Keep the previous working version available for rollback.

Check: record what changed and confirm you are still working in the intended demo project.

Test, troubleshoot, repeat.

If something goes wrong

If assets fail only after deployment, inspect path case and root-relative URLs. A local path on your computer cannot be loaded by visitors.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

The approved public URL serves the intended version and all relative assets and links resolve.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____

Sources and guide status

Original exercise by Ray / SETLY. Credited technical references are linked on page one. Prepared 1 October 2026. SETLY screen recording and independent learner reproduction are not yet complete. No platform affiliation is implied.
