

Adjust the mobile layout

Make the existing homepage usable on a small screen.

THE FINISHED RESULT

No essential text is hidden, no sections overlap, and navigation and contact actions work in mobile preview.

Before you start

Environment: Wix Editor, desktop and mobile views

Access and plan: Wix demo account. Preview work can start without a custom domain; domains, bookings and other features depend on the selected plan.

Practice project: Harbor Home Care

Use a separate demo project and fictional information. Record the exact project and version you use. Keep passwords, verification codes and private customer information out of screenshots and notes.

Official walkthroughs

[Wix: mobile editor](#)

Open the credited publisher walkthrough for current interface instructions and available screenshots, then return to the SETLY exercise. External courses remain with their publishers; this PDF does not reproduce their complete tutorial.

Your practice task

Finish one action at a time. Inspect the resulting screen or record before moving on. If a control differs, check the matching official instructions instead of guessing.

01 / Step 1

Switch from desktop to the Wix mobile editor. Starting at the header, inspect the page in reading order rather than adjusting random elements.

Check: record what changed and confirm you are still working in the intended demo project.

02 / Step 2

Resize long headings and stack service content so nothing clips. Keep the contact action near its related explanation.

Check: record what changed and confirm you are still working in the intended demo project.

03 / Step 3

Inspect hidden mobile elements and decide whether each is genuinely optional. Check that essential contact and service information remains available.

Check: record what changed and confirm you are still working in the intended demo project.

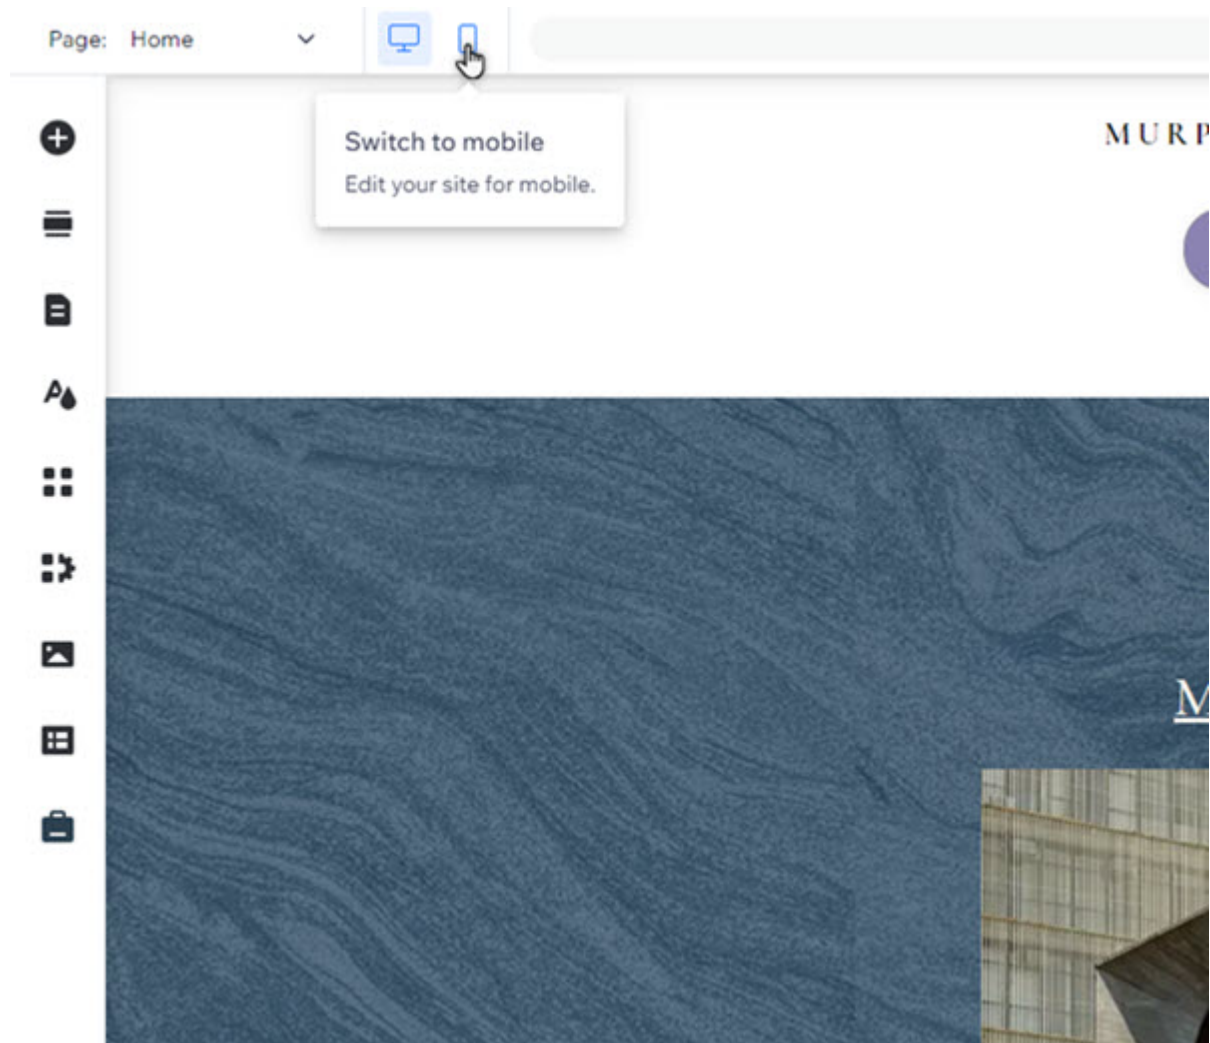

04 / Step 4

Preview, open the mobile menu and follow the contact link. Return to desktop and confirm the original content is still coherent.

Check: record what changed and confirm you are still working in the intended demo project.

Switch to the mobile editor

Shows the location of the mobile-view control discussed in the exercise. The publisher's example is not the Harbor project.

Adjust a button in mobile view

Compare the button settings with your own selected element; available options depend on its type.

Test, troubleshoot, repeat.

If something goes wrong

If content seems missing, inspect Hidden on Mobile. If you are editing a mobile-only element, do not expect it to appear on desktop.

If your screen is different

Compare the product, editor, user permissions and selected account with the guide. Open the official reference for your version. Do not perform a live change whose effect you cannot verify.

Final verification

No essential text is hidden, no sections overlap, and navigation and contact actions work in mobile preview.

Repeat the task with one small variation. Record the test date, project/version, expected result, observed result and a non-sensitive evidence reference. Mark skipped checks as untested.

Your evidence record

Test date: _____ Project/version: _____

Observed result: _____

Evidence reference: _____

Remaining issue and next action: _____
